LPG Gas and Footpath Construction

Project Description

This project is a two-part project as follows:

Part 1: Installation of LPG Cooking Gas in the Kitchen

For this part of the project we will install a LPG cooking gas system in our kitchen. This will consist of five burners and four LPG cylinders. This new system will meet all of our cooking needs and will replace the current system of using locally sourced firewood. Using firewood is damaging to the local environment, is labour intensive with regards to collection and it creates a smoky environment in the kitchen which is detrimental to the health of our kitchen staff; this is the primary reason that we wish to switch over to LPG gas. Using firewood also creates a lot of soot on the cooking vessels which makes it challenging to clean them. Soot is also accumulated in the kitchen, primarily on the roof tiles, but also on the walls and surfaces. Due to this it is also challenging to keep the kitchen area neat, tidy and clean.

The budget for this project is: 3,51,518.00 INR (5,120.61 USD) for further budget details please refer to document 2018_07_KSV_Asha_Kitchen_Gas_&_Path_Project_Budget

Part 2: Construction of Block Paving Footpath

For this part of the project we will install an internal block paving footpath from one end of the school to the other which is a total of 2,600 sq/ft. This is the main footpath that is used by the children to get from their hostels to the Yogashala or meals and to their classrooms.

The current footpath is a temporary path made up of stones, broken bricks and roof tiles. There are several disadvantages to this; it is labour intensive to construct this temporary path as we need to construct the path just prior to the monsoon and then remove it after the monsoon, this type of path is not ideal to walk on as it is quite uneven making it somewhat dangerous for the children and it is not aesthetically pleasing.

The budget for this project is: 2,59,304.00 INR (3,777.32 USD) for further budget details please refer to document 2018_07_KSV_Asha_Kitchen_Gas_&_Path_Project_Budget

This project will take place in several phases as follows:

- **June 2018 – Planning the project – design, plans & costing**
 - Measure the site for block paving
 - Estimate our needs for LPG gas
 - Prepare the project budget
 - Obtain quotations
- **July & August 2018 – Apply for funding**
 - Apply to various foundations and corporates for funding
- **September 2018 – Purchase materials**
 - Pay an advance for the block paving
 - Purchase LPG cylinders and stoves etc
 - Bring materials to the site

- **October 2018 – Start construction & installation**
 - Install LPG stoves and cylinders
 - Remove existing footpath and install the new block paving
- **November 2018 – Reporting and evaluation**
 - Have the project evaluated
 - Send report to all funding partners

Should you require any further information, or have any queries, then I remain at your disposal. Please rest assured of KSV's enduring commitment to the children of the institution and the vibrant and diverse culture of India and Karnataka.

Yours faithfully
